The Montana BLACK range welcomes the return of the newly optimised, BLACKOUT Tarblack. This combination Nitro-Combi & Tar-Mix can is the perfect high pressure 400ml can to cover any chrome effect or metallic colors, wet or dry. The BLACKOUT Tarblack itself has an extremely fast drying time of around 2 minutes in conditions 15 degree's celcius or higher. This is about 3 times faster than normal tar products. With it's pigmented matt black tar formular, it also offers a rich black finish, as apposed to the prominent brown undertones you may be used to from other brands. Loaded with the Black/Orange dot fat cap, be prepared to cover large surface area rapidly and cleanly. Particularly good on non-primed surfaces where paint would usually be absorbed, the BLACKOUT Tar black leaves behind a beautifully opaque clean line. (Allow to dry completely before painting over).
